

Behaviour scatterplot and coverage log

Original time-window grid; occurrence, nonoccurrence and missing coverage remain distinct. therapycrm.io

Defined event / valid full-window rule / planned period

Dates corresponding to Day 1 through Day 5

Key: O occurred; Z fully observed with no occurrence; P partial coverage; N no observation arranged; M expected record missing. Only O and Z enter this occurrence-window summary.

Enter actual dates and chosen window lengths

| Window / activity | Day 1 | Day 2 | Day 3 | Day 4 | Day 5 |
|-------------------|-------|-------|-------|-------|-------|
|                   |       |       |       |       |       |
|                   |       |       |       |       |       |
|                   |       |       |       |       |       |
|                   |       |       |       |       |       |
|                   |       |       |       |       |       |
|                   |       |       |       |       |       |
|                   |       |       |       |       |       |
|                   |       |       |       |       |       |

Occurrence windows / valid windows / coverage counts

Actual coverage and context

Record partial, unavailable or unusual windows

| Date / window | Actual observation | Status | Activity / access / context |
|---------------|--------------------|--------|-----------------------------|
|               |                    |        |                             |
|               |                    |        |                             |
|               |                    |        |                             |
|               |                    |        |                             |
|               |                    |        |                             |
|               |                    |        |                             |
|               |                    |        |                             |
