

ABA data collection method selection worksheet

One page to record why a measurement method was chosen for one target. therapycrm.io

Completed by _____ Supervising clinician _____

Target behaviour or skill and observable definition (examples / non-examples)

What should change: up, down, faster, longer, more independent, more varied

Observer availability: who, how long, teaching at the same time?

Methods considered (mark Kept or Set aside and give the reason)

Method	Kept / set aside	Could over-estimate when	Could under-estimate when

Chosen method, interval length or sampling moment, session length

What a reader could wrongly conclude from this number

Review date and who reviews

Methods: frequency / rate, duration, latency, partial interval, whole interval, momentary time sampling, trial-by-trial (DTT), permanent product. The supervising clinician chooses the method. Write the method and its settings next to every result and compare numbers only within the same method. Missed or invalid observations are recorded as such, not as absent.
